## SUMMARY

Looking for a Web Developer position that is challenging and provides me with the chance to learn new things and advance my career in a company. I have a strong interest in learning new technologies, and I'm keen to expand my professional experience in order to become a better developer.

## PERSONAL PROJECT

### Information Student

🔗 https://github.com/VonIsaac/INFORMATION_STUDENT-inprog-project-

- **This is a MERN Stack Web Application build in React JS and Tailwind CSS for Front End and Express JS for Backend and MongoDB for Database.**
- **This Web App Display the students include name, age, address, image, etc**
- **I stored data in MongoDB then I connect to Express JS**
- **Then use Mongoose to connec to express and use get req method in express.**
- **The First Data you in UI is the Image of Student then If you click the image you can see the details of each student.**

### Shoes Shop Application

🔗 https://github.com/VonIsaac/shoes-app-react

- **This is a Full Stack Application build in React Js and Tailwind CSS for Front End and Express Js for Backend.**
- **I work a lot in this project and I am focusing on Front End, and I use a lot of fundamentals in react such hooks, state and props, component rendering, styling and lifecycle method.**
- **I send POST requests to the backend and communicate with it effectively by handling fetched data.**
- **This application allows user to select any items and when selecting items is done, all data of item that selected are go in the cart components, It allows users to see the Item data including name, price and quantity of item that selected.**
- **And also allow users to increase and decrease the item that user selected and also the price and quantity of item are updated.**

## CERTIFICATIONS

### UDEMY

📅 09/2024 - Present

REACT JS (incl. NEXT.JS, REDUX-TOOLKIT)

### Share Gadgets

🔗 https://github.com/VonIsaac/Share-Gadgets-nextjs

- **Developing this web application build in next.js using App Routher and Tailwind CSS for Styling and lastly better-sqlite for database.**
- **This Web application allows user's to share some favorite gadgets and display in the UI.**
- **After the user shared, you can see the images, name and description of item in the UI, and if you want to see the full details of the item you must click the button and go to another page and you can see the all details of a gadgets the user shared.**
- **All the default data of gadgets that display in the UI are stored in my better-sqlite3 db and all the data I stored are displayed also as well in the database.**
